TBS X509 Sign&Login

TBS X509 Sign&Login is a class 2 certificate allowing its owner to authenticate strongly, to benefit from a digital signature or to sign documents such as PDF.

Strong authentication is an alternative to the basic username and password system and is specifically recommended to regulate the access to your intranet or extranet web sites. Your customers or partners don't have to remember login and password as the certificate identifies them.

tbs X509

TBS X509, TBS Internet's own brand, was created back in 2006 to provide a wide range of server and user certificates.

With over 10 years experience in the industry, as well as a highly qualified, highly professional support team, TBS INTERNET has all what is required to cover your digital certification needs.

trust booster

TBS INTERNET was founded in 1996 by IT security specialists to help companies comply with encryption best practices. Customers include leading companies, value-added resellers and public sectors.

Since the early days, TBS INTERNET offered a highly professional service issuing as well as installing digital certificates for its clients. As Internet usage grew and companies began to require specialized online security, it was the first to create a multi-brand digital certificate platform, securing platinum partnerships with major SSL providers.

Thanks to it's own certification authority "TBS X509" the company can provide competitive authenticated certificates very well supported in browsers.

Equipment
Delivered in software format
